Phys 111 / Phys 112

How much physics did you learn?

- I learned a lot
- I learned some
- I learned little
- I learned nothing

How much work was required?

- Way too much
- A little too much
- About right
- A bit more needed
- Lots more needed

How was the math level?

- Way too high
- A bit too high
- About right
- A bit too low
- Way too low
Phys 111 / Phys 112

Sample student comments:

The labs were good examples of what we were going over in class.
I enjoyed the labs and working with the lenses.
Don't have labs and homework due the same day, only having one day to do the lab write up.
More time for Quantum Mechanics.
The prof -- always willing to answer questions and help whenever needed.
I don't like the cumulative final -- just too much info throughout semester.
The labs were nice. They helped to solidify what we were learning in class.
The final [was my least favorite part of the course], there is a lot of information presented in such a short test.
I struggled at the beginning b/c I didn't realize how complicated the problems could be.
I think we should have more tests so our grade does not depend on only three.
I like the labs because they help me understand what we are learning.
The professor does a very good job of teaching the material and I can tell he loves physics.
The labs did a good job of relating to what we were talking about in class.
I would change the first part so that there wouldn't be like 8 chapters on our first test.
   It was too much information for me to have to study and remember. I don't feel I learned really well because I had to know so much.
